

Andre Budrevich is Senior SIMS Engineer at Technology and Manufacturing Group at Intel Corporation. He is responsible for the analytical support of advanced silicon technology development and manufacturing. He works with industry and academia to drive synergistic collaboration and development to advance metrology and diagnostic capability for the semiconductor industry. Dr. Budrevich holds more than 40 patents, primarily in the field of technology development for advanced transistor and interconnects metallization. Dr. Budrevich published more than 30 refereed papers, as well as a book chapter on SIMS metrology on the transistor scale.

Budrevich has a Bachelor's and Master's degree in Physical Electronics from Tashkent Polytech Institute, and a D.Sc. in Chemical Physics from the Technion, Israel institute of Technology.
