

**Olivier Renault** is Team Leader of the Surface Analysis group at the Nanocharacterization Platform of CEA-Leti since 2006. His activities deal with photoemission techniques and analytical methods for device technology and related materials, including X-ray photoelectron spectroscopy (XPS), hard X-ray photoelectron spectroscopy (HAXPES) and photoemission electron microscopy (PEEM) for elemental, chemical, work function and band structure imaging, with at times the use of synchrotron radiation. He joined Leti in 2000 after a Ph.D. degree from Grenoble Polytechnical Engineering Institute and a Post-Doctoral stay at the University of Oxford, UK (Physical Electronics Group, Department of Engineering Science). Since 2015 he has been involved in the organization of

events related to photoemission, such as the Focus Topic “Novel Trends in Light Sources” at the Annual Symposium of the American Vacuum Society, and the Photoelectron Spectroscopy Annual Workshop of the French Vacuum Society. He is also, since 2020, Chief Scientist of the Metrology and Physical Characterization Department at LETI.
