

Paul A. W. van der Heide is the Director of the Materials and Component Analysis (MCA) Department at imec, in Leuven, Belgium. The scope of MCA is to **a)** support the characterization needs of imec (capabilities include APT, Raman, RBS, SIMS, SPM, TEM, XPS, ...), and **b)** explore, develop and implement the characterization capabilities required for tomorrow's industry. Prior to moving to imec, Paul held positions at GLOBALFOUNDRIES, Malta, NY, USA (where he headed the end-to-end analytical labs support for high volume semiconductor device manufacturing and R&D), Samsung, Austin, TX, USA (where he established and managed the surface characterization labs for supporting high volume device manufacturing), and the University of Houston, TX, USA (where he lectured in Physical Chemistry and Surface Analysis,

while also managing the MRSEC SIMS-XPS facility). Paul earned a Ph.D. in Physical Chemistry from the University of Auckland, New Zealand (topic concerned the design and construction of a magnetic sector SIMS instrument), has authored over 150 publications in international peer reviewed journals, has presented ~20 invited and 2 plenary talks, and is sole author of two books published through Wiley.
